

## TECHNICAL DATA SHEET

An intelligent combination of biocides and slow release detergents.

---

### PRODUCT DESCRIPTION

Qcide is an 'intelligent' maintenance application. It is a fully biodegradable, non bleaching, non acidic combination of biocides and slow release detergents.

The biocides prevent the build up of moss, algae, and lichen which can afflict paving of all types. This is particularly the case in sheltered north facing low traffic areas where 'greening' is very prevalent. It can if left untreated become very slippery, and is unattractive in featured high profile areas.

The slow release detergents actively clean the surface when combined with naturally created moisture.

The application has a typical life between treatments of circa 6 - 9 months making this a twice yearly treatment at most.

It can be trafficked virtually immediately but ideally the surface needs to be clean at the outset to get the best out of the first application.

---

### ADVANTAGES

If used in combination with Qseal, Qstone or Qset it maintains an outstanding level of presentation at lowest maintenance cost.

If QSS Pavecare is specified then Qcide is an inherent part of the inspection and remedial action programme provided.

Qcide can on request be supplied for DIY application by the client or contractor.

Highly cost effective .

---

### TYPICAL USES

Qcide is not a replacement for cleaning but it holds appearance levels at hitherto unprecedented levels at lowest cost.

All paved, decked or fenced areas where the risk of 'greening up' is prevalent.

---

### COLOUR

Some initial discolouration may occur. This is normal and will quickly dissipate.

---

### DIRECTIONS FOR USE

Usually applied using back pack spray equipment. Basic protection is required.

Keep people away from using the surface until it is completely dry. If they do walk on it please wash off any residue.

If pets walk on it inadvertently when wet then wash off with water and dry paws etc.

Keep away from flowers and plants. If spilt on them then wash off with lots of water. Shield when spraying.

See clear instructions on the packaging and comply with them.

---

### METHOD OF APPLICATION

By Spray. Surface MUST be dry prior to treatment. Do NOT apply if rain is anticipated within 6 hours of the application.

Saturate the area being treated with Qcide. The longer the treatment takes to dry the better. Thus avoid applying in very sunny or hot conditions.

---

### TECHNICAL INFORMATION

#### Shelf life

Typically 6 months.

#### Storage instructions

In a cool dry frost free environment away from access to children.

#### Coverage

On horizontal surfaces:

3-4 m<sup>2</sup> per litre of diluted mix.

On vertical surfaces:

7 m<sup>2</sup> per litre of diluted mix.

#### Results Show

Within 4 days and keep on improving.
